PROFILE

I build clear, verifiable software around real operational processes. My work connects interface, data, permissions, quality checks and deployment from a product perspective.

CORE STACK

React, TypeScript, JavaScript, Vite, Supabase, PostgreSQL, SQL, REST APIs, n8n, Node.js, Vitest, Testing Library, GitHub Actions, Cloudflare and WordPress.

SELECTED PROJECTS

Incidencia Facil - deployed product	QR-based incident management from a public no-login report to private operations. Full Stack contribution across interface, multi-tenant data, permissions, QA and deployment. React, Supabase, PostgreSQL, Cloudflare.
OpsFlow Dashboard - public demo	Operational React and TypeScript interface with forms, filters, metrics and list/Kanban views. Includes Vitest, Testing Library and GitHub Actions. Uses simulated data and no real backend or permissions.
Cronicas del Cosmos - editorial automation	On-demand process for ingesting, normalising, validating and preparing publications. n8n workflows with REST, RSS, JSON and WordPress, plus scoring, deduplication and retries.

EXPERIENCE

CodeArts Solutions - Software development internship, 2025. Collaboration on existing codebases with Drupal/DDEV, Symfony, Docker, Unity and Git/GitHub.

Andalusian Health Service and hospitals - 2015 to present. More than eight years in high-responsibility environments focused on quality, traceability, security, documentation and systematic incident resolution. Transferable operational context, not clinical software development.

EDUCATION

Higher Technician in Multiplatform Application Development (DAM), iLERNA - completed 2026, 8.367/10. Computer Engineering degree, Universitat Oberta de Catalunya - in progress.

CONTACT

Available for remote Full Stack or Frontend React opportunities from Spain and roles in Malaga.
